

Appln. No.: 10/713,209
Response under 37 C.F.R. § 1.114(c)

containing composition for the high refractive index layer provides superior adhesion between the high refractive index layer and the low refractive index layer and superior light transmittance compared to that of ITO containing composition.

Applicants submit herewith a Declaration under 37 C.F.R. § 1.132 with additional experimental data that was not previously considered to overcome the § 103 rejection over Nishida in view of Kumazawa. The examples in the Declaration submitted herewith includes examples showing that an ATO containing composition for the high refractive index layer provides superior adhesion between the high refractive index layer and the low refractive index layer and superior transmittance as compared to an ITO containing composition for the high refractive index as compared with Nishida and Kumazawa.

In view of the Declaration under 37 C.F.R. § 1.132, Applicants submit that the claimed invention would not be obvious over Nishida and Kumazawa. Accordingly, Applicants respectfully request that the Examiner reconsider and withdraw the rejection.

In view of the above, reconsideration and allowance of this application are now believed to be in order, and such actions are hereby solicited. If any points remain in issue which the Examiner feels may be best resolved through a personal or telephone interview, the Examiner is kindly requested to contact the undersigned at the telephone number listed below.
